MTI MACHINE REFURBISHMENT

You rely on it to meet your production needs, so if your friction welder begins to become less efficient, it won't take long for you to notice. If you think completely replacing your machine is your only option - think again.

MACHINE REFURBISHMENT OFFERINGS

DON'T REPLACE - REFURBISH!

Even the strongest, most robust machines eventually begin to show their age after years of extended use. While your first instinct may be to adjust your budget and buy a whole new friction welder, MTI offers another, more cost-effective option to help restore your productivity.

MTI's Machine Refurbishment Program can help transform your outdated and underperforming friction welder into a contemporary and efficient machine once again - all for a fraction of the price of a new friction welder.

Many times, the "bones" of a machine may still be usable - they often could just use a little help from updated equipment and technological advances.

Worried about taking your machine out of service for an upgrade? Our Manufacturing Services team can handle your parts while your machine is being improved! Learn how [HERE](#).

SIGNS IT'S TIME FOR A REFURB

How do you know it's time to start considering a machine refurbishment? Consider these signs as a guide:

YOU'RE FALLING BEHIND IN PRODUCTIVITY

One MTI aerospace customer was able to cut its project lead time in half by refurbishing its machine from the 1980s.

YOUR FRICTION WELDER IS RUNNING WARMER THAN NORMAL

When your machine isn't running properly, it can develop "hot spots."

YOU'RE STILL USING A DOS OR WINDOWS XP-BASED MACHINE

Upgrading to Windows 10 automatically allows you to tap into our remote monitoring services, which can allow us to diagnose issues from afar. This is key to keeping your machine running at its peak.

YOUR QUALITY IS SUFFERING

If you notice accuracy and weld strength is lacking, a refurb can fix this.

YOU CAN'T AFFORD A NEW MACHINE RIGHT NOW

A refurbishment is much more cost-effective than a replacement.

OTHER COST-EFFECTIVE SOLUTIONS

If you don't think a refurbishment is right for your friction welder, consider a SPARTAN direct drive machine. Click [HERE](#) to learn about this lower-cost option.
